#### **Everything Canine**

Usage Reports, Supplement Reports, Training Reports, Expenses, Group Training, Certifications, Vaccinations, Inventory & more...

#### **Cloud-Based**

Developed in the cloud, so access is available on any device and data is automatically synced between all devices that access K9track.com.

#### **Group Training**

Allow training managers to setup a training template and then push that template to everyone in the training group and each member receives a notification.

## **Product Summary**

Developed in 2008, K9track.com is a cloud-based software application developed specifically for the management of public safety canines. The tracking application enables handlers to more effectively manage and maintain their canine deployment reports, supplement reports, and training reports.

#### Handlers Can Track:

- Canine miscellaneous cost
- Detailed medical cost
- Canine certifications
- Canine resumes
- Canine vaccinations
- Training by types
- Training by number of hours

- Training by days of the week
- Training by months
- Training by distractors types
- Training by substance types
- Training by evidence types
- Training by types of weather
- Training by types of conditions

#### **Application Access**

Since K9track.com is a web-based application there are no software packages to download and install, no record synchronization and no data backups are required by the end user. We manage all data synchronization, storage security and daily backups for you.

## Reporting

Complete usage and training report statistics can be produced on a daily/monthly/yearly basis producing detailed reports on all aspects of training applied as well as detailed canine usage/deployment reports.

#### **Incident Reporting**

With our incident reports you can track information on the following:

- Persons associated
- Other canines associated
- Other officers associated
- Activities associated
- Drug finds associated
- Vehicle associated

- Use of force reports associated
- Seizures associated
- Pictures and documents associated
- Narratives associated

## Administration

With multi-handler accounts, administrators or an administrator's designee can manage handlers reports and send a report back to a handler if the report has errors, thus allowing the handler to make the needed corrections and then resubmit the report for review and approval. Account administrators can also manage other handlers accounts restricting access to certain parts of the K9track.com application.

## **Group Training**

With K9track.com, your agency can setup and manage training days and then share that information with any other handler/agency using K9track.com. Your training manager can setup the training day with all of the activities completed and then send that information out to all handlers in the training group. Every handler in the training group will receive a notification of the training day and be able to import that day into their individual accounts.

## **Application Customization**

With K9track.com, an administrator or designee can customize the system to further meet your agencies needs, manage system drop downs - allowing you to ask and track specific options within each usage report, supplement report, and training report.

#### **Data Security & Safeguards**

The K9track.com servers are located in state-of-the-art Amazon Web Services Government (East Coast) data centers. These centers provide biometric access controls, constant surveillance, redundant power feeds, backup generators, robust fire suppression and carefully monitored climate control to protect the servers that store your department's data. Data from your browser to our servers is encrypted with TLS, and data at rest on our servers are encrypted using AES-256 encryption.

#### Help & Support

If you are the administrator of your account, you can reach support via phone Monday through Friday 9:00 am to 5:00 pm CST. You can also chat with us online from within the K9track.com application or submit a support ticket at anytime.
